CAKEMOON

White Paper

Summary

Introduction

The new era demands a new innovation in the community. The new era demands $CakeMoon. $CakeMoon brings a big potential to rise and survive, this crypto has the potential to deliver multifold returns in $CAKE. Initial investors will be tremendously rewarded with huge profit margins, they will be able to see growth as soon as they invest.

The big issue is with tokens that reward, it's own holders with their own coin, like safemoon, so basically in the end, causes the coin to be more inflationary and less deflationary. This happens because instead of burning the supply in each trade, a lot of coins continue to be in circulation. With $CakeMoon this can't happen, because the rewards and lotteries are with $CAKE.

Another problem is exacerbated in tokens that have farming reward generators where holders stake their owned tokens in order to provide a liquidity pool (LP) for the token. The potential reward of six-digit APY figures encourages a premature valuation bubble, which will cause a precipitous collapse and automatically.

$CakeMoon uses an agreement that both tackles the problems caused by farming rewards, and dishearten the large sell- offs that cause more tokens to decline in value.

Static Rewards with CAKE

 The reward amount is conditional upon the capacity of the token being traded. This technique aims to reduce some of the downward sell pressure put on the token caused by earlier adopters selling their tokens after farming crazy high APY's. And, the reflect mechanism hearten holders to hang onto their tokens to garner higher kick-backs which are based upon a percentage carried out and dependent upon the total tokens held by the owner. And all of this happens with $CAKE, making it stable from huge inflationary waves, and at the same time rewarding holders with another strong asset. So basically static rewards solve a host of problems

Lottery

 One of the principal partners of the CakeMoon token is the lottery. Most other tokens that use the lottery have the problem of not being able to use it to grow the holders and community, making it automatic. But, the CakeMoon project is gonna grow faster because it will be done in a different way, by creating automatic lotteries and a manual lottery. The manual lottery will be done with competitions, the more people each participant invites, the more likely they are to win. And the automatic will happen when the fees collect the amount necessary Coins from lottery will be get from lottery fees, which are 1% from every transaction Winner from lottery will receive $CAKE, this will avoid inflating the price of $CakeMoon.

RoadMap

Stage One
- Create Website and Token
- Start Private Sale with Whitelist
- Promote in Crypto Moon Shots
- Start ICO
- CoinSniper application
- CoinHunt application

Stage Two
- Get 5000 holders
- CoinGecko application
- CoinMarketCap application
- Begin talks regarding lotteries

Stage Three
- Create a rewarding system for shillers
- Hire more big influencers int twitter, tiktok and youtube

Stage Four
- Promote using paid traffic, like Facebook ads and Google ads
- Beginning of getting listed on Exchanges like Kucoin & Binance

Conclusion

CakeMoon is meant to be a new innovation in the market, presenting the CakeMoon function as well as three others, Automatic Liquidity, Burns & Rewarding with $CAKE.
